Hanwha Q CELLS Malaysia Sdn. Bhd.

Successful Bird Proofing With Rentokil Bird Netting System

Hanwha Q CELLS (Hanwha Solutions Q cells division) is one of the world's leading clean energy companies, recognised for its established reputation as a manufacturer of high performance and quality solar cells, modules, a portfolio of intelligent storage systems, and a growing international pipeline of large-scale renewable energy projects.

Understanding the Need

Hanwha Q CELLS Malaysia, a global leader in the photovoltaic industry, is a complete clean energy solutions provider operating worldwide. The company is dedicated to efficient, large-scale production of high-quality solar cells and modules.

In pursuit of this goal, Hanwha Q CELLS Malaysia faces a unique challenge — bird droppings. These seemingly minor intrusions can significantly impact operations, particularly at maintenance areas.

Meeting the Challenge

The company shared its concern about bird droppings at their maintenance working area. These not only impacted the cleanliness of the facility but also posed potential risks to equipment and personnel.

To address this issue, Hanwha Q CELLS Malaysia engaged Rentokil to install **Bird Netting**. The primary objective was to **create a barrier preventing birds from accessing the area** and, consequently, **eliminating the problem of bird droppings**. Ms. Liyana, the project engineer, was particularly impressed with Rentokil's commitment to safety compliance, effective communication, and expert knowledge. Since the installation of the bird netting, the company has experienced a significant improvement in the cleanliness and safety of the maintenance area. Overall, Ms. Liyana was satisfied with Rentokil's services and would highly recommend them to businesses facing similar challenges.

“Bird proofing project lead took his time to explain to me the details of bird control methods, he is well mannered and knowledgeable.

He also answered all my queries about bird proofing. He tried his best to deal with circumstances and meet the project dateline.”
