

Drywood Termite Foaming

Effective treatment against drywood termites

HOW DOES IT WORK?

Typically found in wooden furniture, drywood termites can cause much damage to your homes. The chemical used in the foaming treatment solution causes muscle paralysis in the termites, preventing them from further feeding on your furniture.

1

Incorporates an Enhanced Solution

Deeper penetration and expansion as the foam lathers to a no-drip texture.

2

Treatment Reach

Able to reach challenging areas and blind spots, including the termite galleries.

3

Enhanced Efficacy

Reduces the risk of recurrence and unresolved infestations.

4

Eco-Friendly

The formulation used in the treatment is awarded with the highest Green Label Certification by the Building and Construction Authority (BCA).

*To ensure adequate protection, routine inspections are recommended for early detection of termites
